Quick Display Tip 7 – Floating Panels

Since the Tabs are made of Panels, not only can the display of the Panels be controlled, but also the order in which the Panels are positioned in the Ribbon, each panel can be repositioned within the Tab simply by selecting the Panel by the title and dragging to a new position within the Tab.

The Panels can also be dragged in to the drawing area as below. In the case of the Draw, Modify and Layer Panels, an expansion arrow is to the right of the Panel once selected; it will display the hidden tools.
