

# Align and Scale PDF Underlay in ESTmep

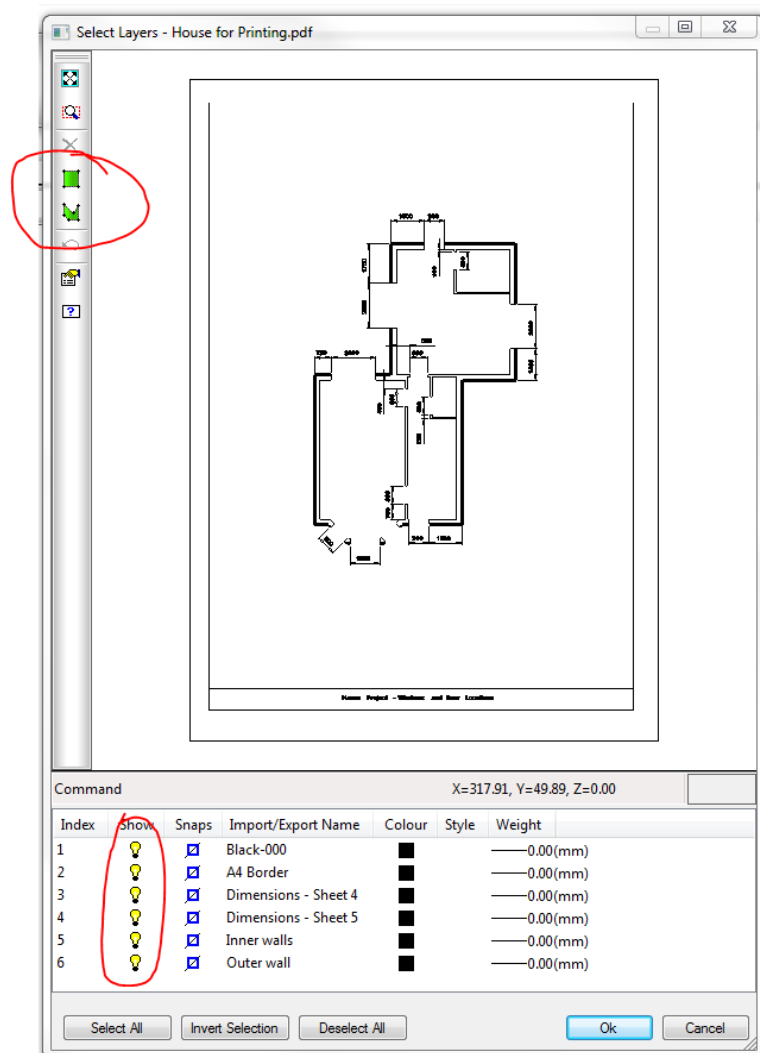

## Autodesk Fabrication ESTmep 2014

In order to work on a PDF Underlay in ESTmep 2014 firstly load the file.

Right click in the 3D viewer window > **Import Underlay**

Select the PDF you want to load and you will be presented with a panel that lets you clip the pdf and select the layers you wish to see.

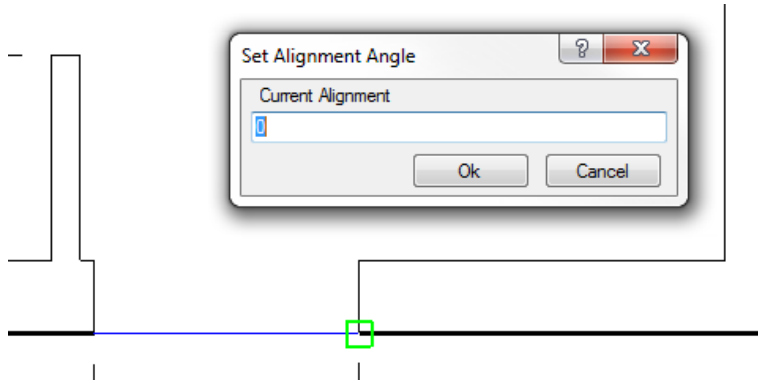

Use the green buttons on the left hand side to clip, and the lightbulbs in the bottom section to hide layers...

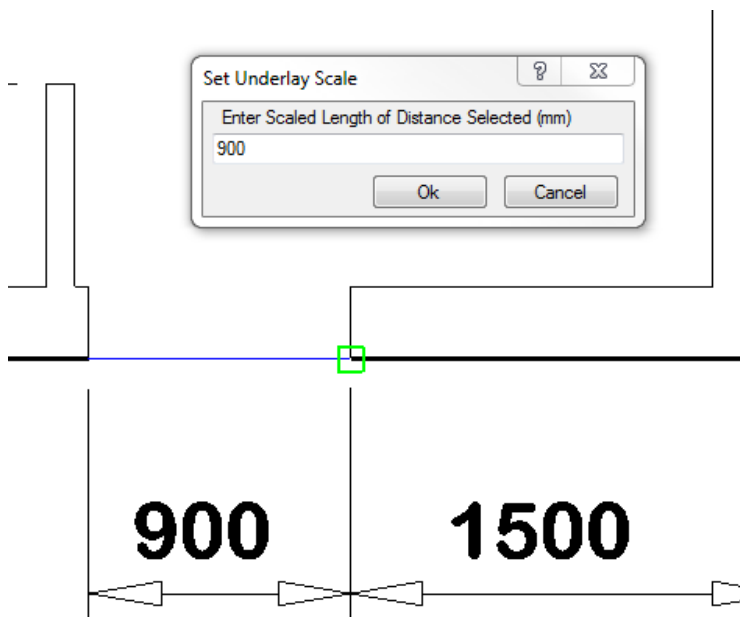

Press OK when ready and place it on the CAD screen.

Next zoom into a dimension that you know the reference of and use the **ALIGNSCALE** tool.

Firstly pick 2 points from the PDF and when prompted enter the Angle that should be at...

And the Size ...

In my example I have set used the dimensioned door opening to set it to 0 degrees, 900mm opening.
