

elecworks™ Tips & Tricks

Adding DWG Files into an elecworks™ Project

elecworks™ has the ability to reuse your existing DWG files. You can drag and drop drawings directly into the graphics zone or add them through the Documents Browser side panel. You can edit the drawings using “vanilla” CAD commands and use elecworks™ as a means of replacing your “vanilla” CAD software.

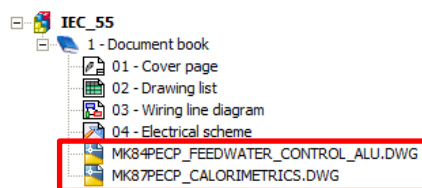

Right click over your current activated projects Document Book

Select *New* >  **Data files...**

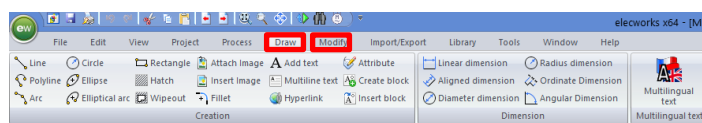

Browse to the DWG files and highlight the drawings you wish to import

Select 

The drawings will appear in your Documents browser

elecworks™ understands that the drawings are “vanilla” DWG files and will change the context sensitive ribbons accordingly:

You can also drag and drop a drawing from Windows Explorer into the graphics zone. elecworks™ will open the file as a separate tab or as a separate drawing window dependent upon your settings.
